Best in EDR. Period.

Understand the MITRE ATT&CK test results

Find the best fit in endpoint detection and response

As your enterprise faces more frequent targeted attacks, you need a more effective approach to detect malicious activity, inform your threat hunting and understand attacker behavior.

The question is: How do you know which offering is the best fit for your organization?

You test them. That's exactly what The MITRE Corporation did in its MITRE ATT&CK™ evaluation trials, rigorously testing 10 EDR vendors against a variety of techniques used by the APT-3 threat group.

Leveraging a scoring framework from Forrester, we've compiled the results and analysis into a new white paper that will help you understand the MITRE ATT&CK test and how to evaluate the results. Read it to see which detection and response product had the best coverage against 136 different attacks and which one is right for you.

You'll also get a straightforward overview of the EDR marketplace as well as a blueprint for assessing your own security posture.

Download the paper to:

• Learn how to evaluate your security tools' effectiveness across the attack lifecycle

• Develop a more effective and scalable strategy to secure your organization

• See how Cortex XDR™ delivers unrivaled detection and investigation capabilities
