

# Why You Need Extended Detection & Response

Get Gartner's perspective in this new XDR report

Gartner

## An Independent Analysis of the XDR Category

### Innovation Insight for Extended Detection and Response

A new Gartner report

[READ IT NOW](#)

Today's security and risk management leaders struggle with too many security tools from different vendors that provide precious little integration when it comes to data or incident response.

This has led to the rise of a new category of **extended detection and response (XDR)** solutions that consolidate the functionality of multiple products into a cohesive security incident detection and response platform.

While there are many benefits to this approach, we believe you'll learn from both the advantages and possible risks of deploying an XDR solution found in this Gartner report.\*

**Read the Gartner report.** We think you'll get a lot of value from their:

- Deep dive into XDR product capabilities
- Frank assessment of XDR benefits, uses and potential risks
- Examples of use cases where XDR makes sense
- Criteria for evaluating the different offerings

Read it today.
